<u>Aim</u>: To Understand Continuous monitoring and Installation and configuration of Nagios Core, Nagios Plugins and NRPE (Nagios Remote Plugin Executor) on Linux Machine.

Theory:

What is Nagios?

Nagios is an open-source software for continuous monitoring of systems, networks, and infrastructures. It runs plugins stored on a server that is connected with a host or another server on your network or the Internet. In case of any failure, Nagios alerts about the issues so that the technical team can perform the recovery process immediately.

Nagios is used for continuous monitoring of systems, applications, service and business processes in a DevOps culture.

Why We Need Nagios tool?

Here are the important reasons to use Nagios monitoring tool:

- Detects all types of network or server issues
- Helps you to find the root cause of the problem which allows you to get the permanent solution to the problem
- Active monitoring of your entire infrastructure and business processes
- Allows you to monitor and troubleshoot server performance issues
- Helps you to plan for infrastructure upgrades before outdated systems create failures
- You can maintain the security and availability of the service
- Automatically fix problems in a panic situation

Features of Nagios

Following are the important features of Nagios monitoring tool:

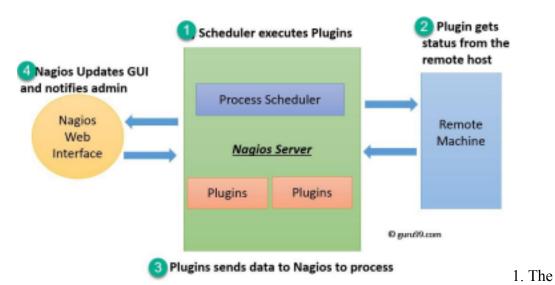

- Relatively scalable, Manageable, and Secure
- Good log and database system
- Informative and attractive web interfaces
- Automatically send alerts if condition changes
- If the services are running fine, then there is no need to do check that host is an alive
- Helps you to detect network errors or server crashes
- You can troubleshoot the performance issues of the server.
- The issues, if any, can be fixed automatically as they are identified during the monitoring process
- You can monitor the entire business process and IT infrastructure with a single pass
 The product's architecture is easy to write new plugins in the language of your choice
 Nagios allows you to read its configuration from an entire directory which helps you to decide how to define individual files

- Utilizes topology to determine dependencies
- Monitor network services like HTTP, SMTP, HTTP, SNMP, FTP, SSH, POP, etc.
- Helps you to define network host hierarchy using parent hosts
- Ability to define event handlers that runs during service or host events for proactive problem resolution
- Support for implementing redundant monitoring hosts

Nagios Architecture

NAME: NISHANT S KHETAL

Nagios is a client-server architecture. Usually, on a network, a Nagios server is running on a host, and plugins are running on all the remote hosts which should be monitored.

scheduler is a component of the server part of Nagios. It sends a signal to execute the plugins at the remote host.

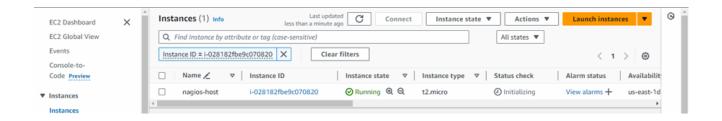

- 2. The plugin gets the status from the remote host
- 3. The plugin sends the data to the process scheduler
- 4. The process scheduler updates the GUI and notifications are sent to admins.

Installation of Nagios

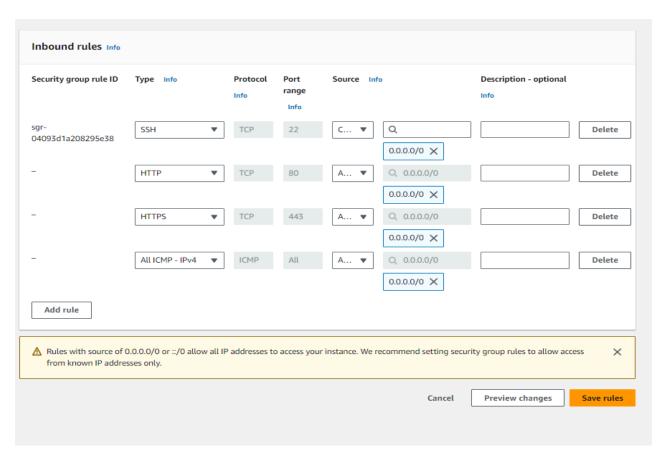

Prerequisites: AWS Free Tier

Steps:

1. Create an Amazon Linux EC2 Instance in AWS and name it - nagios-host

2. Under Security Group, make sure HTTP, HTTPS, SSH, ICMP are open from everywhere. You have to edit the inbound rules of the specified Security Group for this.

3. SSH into Your EC2 instance or simply use EC2 Instance Connect from the browser.

amazonlinux

amazonlinux amazonlinux

amazonlinux

4. Update the package indices and install the following packages using yum

```
sudo yum update
sudo yum install httpd php
sudo yum install gcc glibc glibc-common
sudo yum install gd gd-devel
yum install: error: unrecognized arguments: -0y
[ec2-user@ip-172-31-38-150 ~]$ sudo yum install gd gd-devel -y
Last metadata expiration check: 0:05:12 ago on Sun Oct 6 11:15:04 2024.
Dependencies resolved.
                                                                                         Repository

                                                                                         amazonlinux
                                                      2.1-21.amzn2023.0.2
```

5. Create a new Nagios User with its password. You'll have to enter the password twice for confirmation.

3.0-21.amzn2023.0.4

1.0.10-6.amzn2023.0.2

1.2.3-8.amzn2023.0.2

```
sudo adduser -m nagios
sudo passwd nagios
```

jbigkit-libs

libICE

langpacks-core-font-en

```
Complete!
[ec2-user@ip-172-31-38-150 ~]$ sudo adduser -m nagios
[ec2-user@ip-172-31-38-150 ~]$ sudo passwd nagios
Changing password for user nagios.
New password:
Retype new password:
passwd: all authentication tokens updated successfully.
[ec2-user@ip-172-31-38-150 ~]$
```

x86 64

noarch

x86 64

x86 64

6. Create a new user group

sudo groupadd nagcmd

7. Use these commands so that you don't have to use sudo for Apache and Nagios

```
sudo usermod -a -G nagcmd nagios
sudo usermod -a -G nagcmd apache
```

8. Create a new directory for Nagios downloads

```
mkdir ~/downloads
cd ~/downloads
passwd: all authentication tokens updated successfully.

[ec2-user@ip-172-31-38-150 ~]$ sudo groupadd nagcmd

[ec2-user@ip-172-31-38-150 ~]$ sudo usermod -a -G nagcmd nagios

[ec2-user@ip-172-31-38-150 ~]$ sudo usermod -a -G nagcmd apache

[ec2-user@ip-172-31-38-150 ~]$ mkdir ~/downloads

[ec2-user@ip-172-31-38-150 ~]$ cd ~/downloads

[ec2-user@ip-172-31-38-150 downloads]$ wget https://go.nagios.org/I
```

9. Use wget to download the source zip files.

```
wget https://go.nagios.org/1/975333/2024-09-17/6kqcx
wget https://nagios-plugins.org/download/nagios-plugins-2.4.11.tar.gz
```

```
lecz-user@ip-1/2-31-38-150 downloads] wget nttps:

Fransaction Summary
```

14. Configure the web interface. sudo make install-webconf

15. Create a nagiosadmin account for nagios login along with password. You'll have to specify the password twice.

sudo htpasswd -c /usr/local/nagios/etc/htpasswd.users nagiosadmin

```
[ec2-user@ip-172-31-38-150 nagios-4.4.6]$ sudo htpasswd -c /usr/local/nagio
s/etc/htpasswd.users nagiosadmin
New password:
Re-type new password:
Adding password for user nagiosadmin
[ec2-user@ip-172-31-38-150 nagios-4.4.6]$
```

16. Restart Apache

```
sudo service httpd restart
```

```
[ec2-user@ip-172-31-38-150 nagios-4.4.6]$ sudo service httpd restart Redirecting to /bin/systemctl restart httpd.service [ec2-user@ip-172-31-38-150 nagios-4.4.6]$
```

17. Go back to the downloads folder and unzip the plugins zip file.

```
cd ~/downloads
  tar zxvf nagios-plugins-2.4.11.tar.gz
[ec2-user@ip-172-31-38-150 downloads]$ tar zxvf nagios-plugins-2.4.11.tar.gz
nagios-plugins-2.4.11/build-aux/
nagios-plugins-2.4.11/build-aux/compile
nagios-plugins-2.4.11/build-aux/config.guess
nagios-plugins-2.4.11/build-aux/config.rpath
nagios-plugins-2.4.11/build-aux/config.sub
nagios-plugins-2.4.11/build-aux/install-sh
nagios-plugins-2.4.11/build-aux/ltmain.sh
nagios-plugins-2.4.11/build-aux/missing
nagios-plugins-2.4.11/build-aux/missing
nagios-plugins-2.4.11/build-aux/mkinstalldirs
```

18. Compile and install plugins

```
cd nagios-plugins-2.4.11
./configure --with-nagios-user=nagios --with-nagios-group=nagios
make
sudo make install
[ec2-user@ip-172-31-38-150 downloads]$ cd nagios-plugins-2.4.11
[ec2-user@ip-172-31-38-150 nagios-plugins-2.4.11]$ ./configure --with-nagios-user=nagios
--with-nagios-group=nagios
--with-nagios-group=nagios
checking for a BSD-compatible install... /usr/bin/install -c
checking whether build environment is sane... yes
checking for gawk... gawk
checking for gawk... gawk
checking whether make sets $ (MAKE)... yes
checking whether make supports nested variables... yes
checking whether to enable maintainer-specific portions of Makefiles... yes
```

19. Start Nagios

Add Nagios to the list of system services

```
sudo chkconfig --add nagios
sudo chkconfig nagios on
```

Verify the sample configuration files

sudo /usr/local/nagios/bin/nagios -v /usr/local/nagios/etc/nagios.cfg

```
[ec2-user@ip-172-31-38-150 nagios-plugins-2.4.11]$ sudo /usr/local/nagios/bin/nagios
/usr/local/nagios/etc/nagios.cfg
                                                    sudo /usr/local/nagios/bin/nagios -v
/usr/local/nagios/etc/nagios.cfg

       Checked 8 services.
        Checked 1 hosts.
        Checked 1 host groups.
        Checked 0 service groups.
        Checked 1 contacts.
        Checked 1 contact groups.
        Checked 24 commands.
        Checked 5 time periods.
```

If there are no errors, you can go ahead and start Nagios.

```
sudo service nagios start
```

Things look okay - No serious problems were detected during the pre-flight check [ec2-user@ip-172-31-38-150 nagios-plugins-2.4.11]\$ sudo service nagios start Redirecting to /bin/systemctl start nagios.service [ec2-user@ip-172-31-38-150 nagios-plugins-2.4.11]\$

20. Check the status of Nagios

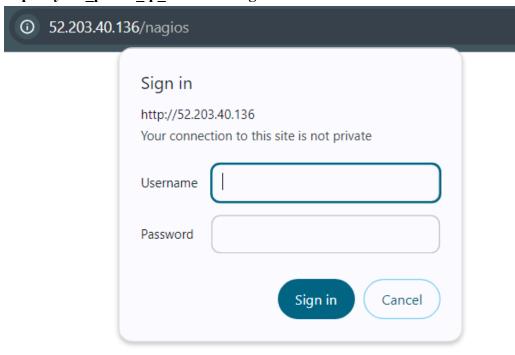

```
sudo systemctl status nagios
Redirecting to /bin/systemctl start nagios.service
[ec2-user@ip-172-31-38-150 nagios-plugins-2.4.11]$ sudo systemctl status nagios

- 21. Go back to EC2 Console and copy the Public IP address of this instance
- 22. Open up your browser and look for http://<your public ip address>/nagios

NAME: NISHANT S KHETAL

23. After entering the correct credentials, you will see this page.

This means that Nagios was correctly installed and configured with its plugins so far.

Conclusion: We have successfully installed and configured Nagios Core, Nagios Plugins, and NRPE on a Linux machine. This enables us to effectively manage system performance and proactively address potential issues.
